Historical Background

- Heartview was established in 1964
- Provides a broad continuum of services including residential, outpatient, continuing care, OTP
- In 2010 Heartview began to integrate technology into clinical care
- The goal was to use technology to engage and retain patients and families in treatment and increase continuing care completion rates
Continuing Care Survey Results

- The mean number of miles (round trip) patients travel to attend continuing care is **37.5** miles (at today’s gas prices -- **$20.06** per week in gas)
- Patients travel between **1-125** miles round trip
- Approximately 20% of patients travel **80** miles (round trip) to attend continuing care groups ($42.80 per week for gas)
SAMHSA Grant Goals

Use technology to:
- Enhance engagement and retention in treatment
- Improve completion of continuing care services

As a result, NAR (Network Assisted Recovery) was created
NAR is a private, social network designed to be a clinical extender to reach rural and underserved patient of Heartview. NAR includes daily messages of support, education, and guidance for Heartview patients which is available 24/7. It provides an opportunity for contact with staff, counselors, and other patients.

Completed Continuing Care (CC)

- Among the 182 participants, 55% (n=101) entered CC at Heartview.

- Participants reporting using NAR at 3 months were more likely to have completed CC, however this difference was not statistically significant.
  - NAR Users: 46% (n=18) completed CC, mean CC visits=13.5
  - Non-NAR Users: 30% (n=3) completed CC, mean CC visits=10
Any Alcohol Use in Past Month by NAR Utilization

- Baseline (n=129): 80% (p=0.73)
- 3 Mon FU (n=129): 22% (No NAR), 20.00% (NAR) (p=0.79)
- 6 Mon FU (n=110): 24.00% (No NAR), 13.00% (NAR) (p=0.79)
Past Month Alcohol & Drug Use at Baseline, 3- & 6 Months
Past Month Outcomes at Baseline, 3 & 6 Months
Change in Service Utilization Between Baseline & Follow-Up at 3/6 Months (n=191)

+$29,485 Outpatient costs
-$260,640 Inpatient/ED costs

Save approximately $2,168 in service expenditures for every patient treated
**Summary**

- Patients that receive treatment at Heartview report at 3- and 6-months after treatment:
  - Less alcohol use
  - Less drug use
  - Less likely to engage in criminal behaviors
  - More likely to obtain employment

- After entering treatment at Heartview, patients’ have less inpatient hospitalizations & emergency department visits

- A health care payer may anticipate a >$2,000 reduction in high intensity service utilization for every patient treated at Heartview
$29,485 Outpatient costs
-$260,640 Inpatient/ED costs

Save approximately $2,168 in service expenditures for every patient treated
