NATIONAL DRUG ABUSE TREATMENT CLINICAL TRIALS NETWORK

The National Drug Abuse Treatment Clinical Trials Network (CTN), a means by which medical and specialty treatment providers, treatment researchers, participating patients, and the National Institute on Drug Abuse cooperatively develop, validate, refine, and deliver new treatment options to patients. This unique partnership enables the following:

- Conducting studies of behavioral, pharmacological, and integrated behavioral and pharmacological treatment interventions of therapeutic effect in rigorous, multisite clinical trials to determine effectiveness across a broad range of treatment settings and diversified patient populations; and
- Ensuring the transfer of research results to physicians, clinicians, providers, and patients.

The CTN framework consists of NIDA, multiple Research Nodes, a Clinical Coordinating Center, and a Data and Statistics Center. This framework provides a broad and powerful infrastructure for the rapid, multisite testing and delivery of promising science-based therapies to patients in a variety of treatment settings nationwide.

For more information, visit the CTN website at www.drugabuse.gov/CTN/.
